SUMMARY

Mobile-focused software engineer with practical experience building responsive, cross-platform applications that deliver seamless, high-performance mobile experiences, plus integrating AI agents to improve development efficiency. Possesses a solid foundation in state management, custom UI architectures, and containerized deployment environments.

Education

BINUS University Bandung, West Java

Bachelor degree candidate in Computer Science *2024 – 2028*

Experience

Cadreization Lead at MT Al-Khawarizmi BINUS Bandung January 2026 – January 2027

BINUS University *Bandung, West Java*

- Spearheaded member onboarding and leadership development programs, designing structured pathways for new recruits across all student activities.
- Facilitated regional alignment meetings and strategy sessions, driving actionable follow-ups, tracking member progression, and evaluating participant engagement.
- Designed and maintained the core member tracking database, collaborating with internal divisions to monitor active participation, retain talent, and streamline event registration workflows.

Projects

Deepfake Detection System | *Python, YOLOv8* June 2026

- Conducted a comparative analysis of object detection algorithms to identify manipulated media and deepfakes.
- Trained and deployed a computer vision model utilizing YOLOv8, hosted as a web application on Hugging Face Spaces.

E-Archive | *Laravel 11, PHP, Vanilla JS, MySQL* June 2026

- Engineered a custom personal blogging platform featuring a distinct Blue Archive-inspired visual theme.
- Built a responsive single-page application (SPA) utilizing Laravel 12 for the backend and React with Inertia.js.

Waypoint | *Flutter, Dart* September 2026

- Engineered a cross-platform savings tracker from scratch using Flutter for web and mobile (Android) deployment from a single codebase.
- Implemented automated daily local notifications scheduled per goal to drive user engagement and consistent savings habits.
- Developed dynamic progress calculation logic that derives remaining weeks and target balances on every edit, ensuring real-time accuracy without storing stale data.

Rumah Kue Hany | *Flutter, Dart, HTML/CSS* October 2026

- Developed a cross-platform web and mobile application for a local business using Flutter, Dart, and static web technologies.
- Streamlined order management by implementing deep-linked WhatsApp integration that automatically formats shopping cart contents into pre-written messages, eliminating administrative dashboard overhead for the business owner.

Technical Skills

Techstacks

- PHP, JavaScript, Flutter, Dart, Kotlin, Laravel, Node.js

Developer Tools

- GitHub, VS Code, Android Studio, GitHub Copilot, Gemini, Claude
